ADMINISTRATOR MANUAL OF DEPARTMENT WEBSITE

Department of Engineering Technology

Faculty of Technology | University of Jaffna

About This Manual

This manual explains how the department website is put together and how to update it safely. Follow the "5-minute version" the first time; afterwards, jump to the section you need.

> **Golden rule:** There is no admin login and no build step. You edit a plain-text file, save it, and upload it. Nothing changes on the live site until the edited file is uploaded, and visitors may need Ctrl+F5 to see it.

> **Tip: always keep a backup.** Before editing, copy the original file to a safe place. If something breaks, you can restore it in seconds.

Contents

Section	Title
1	The 5-minute version
2	How the site is built
3	Every page, and which file controls it
4	How to edit each content file
5	Files and documents
6	How to publish your changes
7	Editing an inner page's own wording (HTML)
8	Quick troubleshooting
9	Do NOT edit
10	Cheat sheet: "I want to change..."
11	Where to get more help

1. The 5-Minute Version

1. Open the file you need in a **plain-text editor** (Notepad++, VS Code, or Notepad). Editable files are in `assets/js/` and all end in `.js`.
2. Change **only the text between the quotes** `"..."`. **Never** change the labels on the left (like `title:` or `name:`). **Never** remove the characters `{ } [ ] , : ;`.
3. Any text in `[square brackets]` is a **placeholder**. Replace it with the real, **approved** wording.
4. Keep **every comma** between items. If you delete an item, delete its **whole** `{ ... }` block and its trailing comma.
5. **Save** the file.
6. **Upload** it to the same folder on the web server (see Section 7).
7. **Refresh** the site in your browser (`Ctrl+F5`) and check the page.

If a page goes **blank or looks broken**, a comma or bracket is missing. Undo with `Ctrl+Z`, or restore the original file from your backup, and try again.

> **What you need:** A text editor, the login for your web host (file manager or FTP), and a copy of this guide. No special software or programming knowledge is required.

2. How the Site Is Built

The website is a collection of plain files. There is no database and no "publish" button. Every page is assembled in two layers:

```
HTML files (structure)          JS data files (your text)
-------------------------       ----------------------------
index.html                      assets/js/content.js
pages/*.html        <------     assets/js/specialisations.js
header, menu, headings          assets/js/research.js
static wording                  assets/js/news.js
                                assets/js/downloads.js
                                assets/js/staff.js
                                         |
                                         v
                              assets/js/site/main.js
                              (the engine: draws the
                               final page in the browser)
```

- The **HTML files** give every page the same header, menu, footer and section headings. You rarely touch them.
- The **data files** hold the department's actual wording: names, messages, news, staff, downloads and so on. These are the files you edit.
- The **engine** (`main.js`) reads the data files each time a page loads and fills in the text. You never edit it.

Because the engine runs in the visitor's browser, a change becomes visible on the live site as soon as the edited data file is uploaded. Nothing else is required.

Folder map

Folder / file	What it is	Edit it?
`assets/js/content.js`	Core text: identity, welcome, Dean/HoD messages, About, facilities, contact	**Yes**
`assets/js/specialisations.js`	The 3 specialisations, homepage academic tiles	**Yes**
`assets/js/research.js`	Research / publications list	**Yes**
`assets/js/news.js`	News and announcements	**Yes**
`assets/js/downloads.js`	E-Resources / downloads sections	**Yes**
`assets/js/staff.js`	All staff records	**Yes**
`assets/js/site/main.js`	The engine that draws the pages	**No. Never edit.**
`assets/css/styles.css`	Colours, fonts and layout	Designer only
`assets/images/`	Logos, photos, placeholders	Upload images here
`assets/documents/`	PDFs and downloadable files	Upload files here
`pages/*.html`	One file per inner page (structure only)	Rarely (Section 8)
`index.html`, `404.html`	Home page and not-found page	Rarely
`docs/`	These instructions	Reference only

The data files win. A page's changing text comes from `assets/js/*.js`. The `.html` files only provide structure and fixed headings.

3. Every Page, and Which File Controls It

Page (in browser)	File on disk	Content comes from
Home	`index.html`	`content.js`, `specialisations.js`, `news.js`
About Us	`pages/about.html`	`content.js` (`dean`, `hod`, `about`)
Our Research	`pages/research.html`	`research.js`
E-Resources	`pages/downloads.html`	`downloads.js` (+ specialisations' own files)
Staff	`pages/staff.html`	`staff.js`
Facilities	`pages/facilities.html`	`content.js` (`facilities`)
News & Announcements	`pages/news.html`	`news.js`
Contact Us	`pages/contact.html`	`content.js` (`contact`)

Page (in browser)	File on disk	Content comes from
Automobile / Construction / Electro Technology	`pages/automobile-technology.html`, `pages/construction-technology.html`, `pages/electro-technology.html`	`specialisations.js` (+ `content.js`, `research.js`, `staff.js`)
404 (page not found)	`404.html`	Fixed wording (edit the HTML if needed)

A **shared header and footer** appear on every page. Their text comes from `content.js` (`institution`, `contact`) plus the static HTML of each page.

> **Note:** The Academics item in the menu is a dropdown, not a separate page. Its links go straight to the three specialisation pages.

4. How to Edit Each Content File

Each file below starts with a **"SECTIONS IN THIS FILE"** list and a field guide, so you can always look at the top of the file for a reminder.

4.1 content.js: Core Text

Controls: university, faculty and department names; the homepage welcome text and image; the Dean's message; the Head of Department message; the About page (vision, mission, history); facilities; and all contact details (address, email, phone, map, social links).

- **Change a message:** edit the text inside the `[ ... ]` in `dean.message` or `hod.message`.

```
dean: {
    name: "[Dean's Name]",
    title: "Dean, Faculty of Technology",
    photo: "assets/images/dean_image.png",
    photoAlt: "Placeholder portrait of the Dean, Faculty of Technology",
    message: ["[Insert the approved Dean's message here.]"]
  },

department: {
    heading: "Welcome to the Department of Engineering Technology",
    intro: ["[Insert the approved Dean's message here.]"],
    image: "assets/images/FOT-image.png",
    imageAlt: "Faculty of Technology",
    focus: ""
  },
```

- **Change contact details:** edit `address`, `email`, `phone`. A real email becomes a clickable `mailto:` link automatically.
- **Published contact details:** the address, phone and email have been supplied by the department and appear on the Contact page and in the footer. To hide one, clear that value. The Contact page then shows "[Address to be added]", "[Telephone to be added]" or "[Email to be added]", and the footer leaves it out.
- **Address format:** one entry per line in `address`. It prints line by line in the footer ("Ariviyal Nagar, / Kilinochchi, / Sri Lanka.") and as one sentence on the Contact page ("Ariviyal Nagar, Kilinochchi, Sri Lanka."). The commas and full stop are added for you, so write the parts without them. You may also give it as one string: `"Ariviyal Nagar, Kilinochchi, Sri Lanka"`.

```
contact: {
    address: ["Ariviyal Nagar", "Kilinochchi", "Sri Lanka"],
    email: "tech@univ.jfn.ac.lk",
    phone: "(+94) 21-313-5880",
    mapEmbedUrl: "https://www.google.com/maps/embed?pb=!1m18!1m12!2slk",
    social: [
      { icon: "facebook", label: "Facebook",
  url: "https://www.facebook.com/university.jaffna" },
      { icon: "twitter", label: "Twitter",
       url: "https://www.twitter.com/uojofficial" },
      { icon: "linkedin", label: "LinkedIn",
        url: "https://www.linkedin.com/school/9667892/" },
      { icon: "youtube", label: "YouTube",
        url: "https://www.youtube.com/channel/UCMNzGVtXq9_Y4oYOYEkd-
              7Q?sub_confirmation=1" }
    ]
  }
```

- **Add a facility:** copy a `{ ... }` block in `facilities` and edit it.

```
facilities: [
    {
      id: "lab-01",
      name: "Engineering Workshop",
      description: "[Concise description of this laboratory or facility.]",
      image: "assets/images/placeholder-lab.svg",
      imageAlt: "Placeholder image for the Engineering Workshop",
      specialisationIds: ["automobile-technology", "electro-technology"]
    }
```

4.2 specialisations.js: Specialisations

Here can adit a specialisation informations and add curriculums:

```
{
    id: "automobile-technology",
    name: "Automobile Technology",
    pageUrl: "pages/automobile-technology.html",
    description:
      "[Short description of the first specialisation. One or two sentences.]",
    image: "assets/images/specialisation-01.svg",
    imageAlt: "Placeholder image for Automobile Technology",
    coordinatorStaffId: "coordinator-automobile-technology",
    intro:
      "[Introduction to Automobile Technology. Describe what the specialisation is about
        and who it is for.]",
    overview: [
      "[Overview paragraph one for this specialisation.]",
      "[Overview paragraph two for this specialisation.]"
    ],
    curriculum: [
      { title: "[Year 01 / Semester 01]",
      items: [
             { name: "[Subject name 01]", code: "[Subject code 01]", doc: "" },
             { name: "[Subject name 02]", code: "[Subject code 02]", doc: "" }
             ]
      },
      { title: "[Year 01 / Semester 02]",
      items: [
             { name: "[Subject name 01]", code: "[Subject code 01]", doc: "" },
             { name: "[Subject name 02]", code: "[Subject code 02]", doc: "" }
             ]
      }
      ],
    curriculumNote:
      "[Curriculum shown is indicative. Official module codes, credits and regulations
        must be added by the department.]",
    laboratoryIds: ["lab-01", "lab-02"],
    research: {
      summary: "[Brief description of research and project in this specialisation.]"
    },
    downloads: [
      {
        id: "automobile-technology-doc-01",
        title: "Automobile Technology — Programme document",
        format: "PDF",
        size: "",
        url: ""
      }
    ]
  },
```

> Edit the curriculum and downloads only; the other fields are already complete.

To attach a file for downloads: put it in `assets/documents/` and set `url` to `"assets/documents/auto-doc.pdf"`. Leave `url: ""` for no file (never a dead link).

4.3 research.js: Publications

Controls: the Research page and the "Research" block on each specialisation page. To add an item, copy this block and edit it:

```
items: [
    {
      title: "[Research or publication title]",
      authors: "[Author names, co-authors]",
      type: "[Journal article / Conference paper / Thesis]",
      venue: "[Journal or conference name]",
      year: "2026",
      status: "Published",
      specialisationIds: ["automobile-technology"],
      url: ""
    }
  ]
```

Only add work that actually exists. Never invent authors or papers.

4.4 news.js: Announcements

Controls: the homepage news strip and the News page. Add **real, dated** items only, newest first.

```
{
  id: "news-2026-11-01",   // unique; used as the #link anchor
  title: "Announcement title",
  date: "2026-11-01",      // YYYY-MM-DD
  category: "Notice",      // short label
  summary: "One sentence for lists.",
  body: "Full announcement text.",
  doc: { title: "Time table", url: "" }  // optional; "" = no link
}
```

To attach a file: put it in `assets/documents/` and set `url` to `"assets/documents/time-table.pdf"`. Leave `url: ""` for no file (never a dead link).

4.5 downloads.js: E-Resources

Controls: the collapsible sections on the E-Resources page. `downloads` is an **array of sections**; add, rename, reorder or delete sections freely.

```
{
  id: "forms",             // unique
  title: "Forms",          // heading shown to users
  documents: [
    {
      id: "dl-04", title: "Admission form", format: "PDF",
      size: "120 KB", url: "assets/documents/form.pdf"
    }
  ]
}
```

To add a document:

1. Upload it to `assets/documents/`.
2. Copy a document block.
3. Give it a **new** `id`.
4. Set its `url`. Leave `url: ""` until the file exists.

> **Note:** The "Programme Documents" section is built automatically from each specialisation's own downloads. Do not add it here.

4.6 staff.js: Staff

The single source for the Staff page, each specialisation page and the Head of Department block.

```
{
      id: "head-of-department",
      name: "[Head of Department Name]",
      designation: "[Designation]",
      category: "head",
      qualifications: "[Qualifications]",
      photo: "",
      specialisationIds: [
                            "automobile-technology",
                            "construction-technology",
                            "electro-technology"
                            ],
      email: "[head email address]",
      researchInterests: "[Research interests]",
      isHeadOfDepartment: true
    },
```

To add a person:

1. Copy a `{ ... }` block in `members`.
2. Paste it after the last one.
3. Give them a **new** `id`.
4. Fill in the fields.

> **Important:** Keep exactly one person with `isHeadOfDepartment: true`.

4.7 The Codes You Will See

Every specialisation, staff member and document has a short **code** (the `id` field). The codes are written in plain words so you can tell what they mean at a glance.

Specialisation codes

Used in `specialisations.js`, `staff.js` and `research.js`.

Code	Specialisation
`automobile-technology`	Automobile Technology
`construction-technology`	Construction Technology
`electro-technology`	Electro Technology

Staff codes

Used in `staff.js`, and in `coordinatorStaffId` in `specialisations.js`.

Code	Meaning
`head-of-department`	The Head of Department
`coordinator-automobile-technology`	Coordinator of Automobile Technology
`coordinator-construction-technology`	Coordinator of Construction Technology
`coordinator-electro-technology`	Coordinator of Electro Technology
`academic-staff-01`, `academic-staff-02`	Academic staff members
`technical-staff-01`	Technical staff members
`administrative-staff-01`	Administrative and support staff

How to use them

- To put a staff member on a specialisation, type that specialisation's code in `specialisationIds`, e.g. `specialisationIds: ["automobile-technology"]`.
- To show a publication on a specialisation page, do the same in `research.js`.
- To name the coordinator of a specialisation, put that person's staff code in `coordinatorStaffId`.
- When you add something new, choose a code that says what it is, in the same style (all lowercase, hyphen-separated), and make sure it is unique.

5. Files and Documents

- **Documents (PDFs, forms, handbooks):** upload to `assets/documents/`, then set the matching `url` (e.g. `"assets/documents/handbook.pdf"`). An empty `url` shows "Not yet available" and never a dead link.
- **Images (photos, logos):** upload to `assets/images/`, then set the matching `image` / `photo` field to the file path (e.g. `"assets/images/dean.jpg"`).
- Paths are **relative to the site root** and start with `assets/`.
- **Links to other pages** are also written from the site root, e.g. `"pages/staff.html"` (not `"staff.html"`). The site works out the correct address for whichever page the link appears on, so always start from the root.
- **Link safety:** links and addresses in the data files are checked before they are used. Only normal web, email and telephone addresses are allowed, so a mistyped or unsafe link is simply not shown.

6. How to Publish Your Changes

You only upload the file(s) you changed.

1. Save your edited file (e.g. `news.js`).
2. Open your web host's file manager (or FTP/SFTP program).
3. Go to the same folder on the server and **overwrite** the old file with the new one (keep the exact same filename).
4. Refresh the website (`Ctrl+F5` bypasses the browser cache).

No "republishing" or taking the site offline is needed. There is no build step.

> **Tip: always keep a backup.** Before editing, copy the original file to a safe place (for example `news.js.backup`). If something breaks, you can restore it in seconds.

7. Editing an Inner Page's Own Wording (HTML)

The menu, footer and a few page headings are written directly in each `.html` file. To change those:

1. Open the page file (e.g. `pages/about.html`) in a text editor.
2. Find the words you want to change **between the tags**, e.g. `<h1>About Us</h1>`. Change only `About Us`.
3. **Do not** change anything inside `< ... >` (those are instructions to the browser).
4. Save and upload the file.

If you are unsure, ask your webperson. A wrong edit here can break the page layout. If you rename a specialisation or a menu entry, the same change must be made in **every** HTML page's menu and footer.

8. Quick Troubleshooting

Problem	Likely cause	Fix
A section is blank / page looks broken	Missing comma or bracket `} ]`	Undo (`Ctrl+Z`) and re-check, or restore the backup file
My change does not appear	File not uploaded, or browser cache	Re-upload, then `Ctrl+F5`
A download link does nothing	`url` is `""` or the file is not in `assets/documents/`	Upload the file and set its `url`
A photo does not show	Wrong path, or file not in `assets/images/`	Check the path spelling and upload the file
Two "Head of Department" people show	More than one `isHeadOfDepartment: true`	Keep exactly one `true`, set the others `false`
A staff member or paper is missing from a specialisation page	Their code is missing from `specialisationIds`	Add the specialisation's code (Section 4.7)
A news notice does not open from a link	The `#news-...` anchor does not match the item's `id`	Make the `id` unique and use it in the link

9. Do NOT Edit

- `assets/js/site/main.js`: the engine. Editing it can break **every** page.
- Anything inside `< ... >` tags in the HTML files (except the wording between tags, as described in Section 8).
- The characters `{ } [ ] , : ;` and the labels (`title:`, `name:`) in the `.js` files.
- The `id`: values that other files point to — `lab-01, head-of-department, automobile-technology, news-2026-10-26.` Renaming one silently breaks the link.
- The `-01, -02` numbering on ids — never renumber, never reuse a retired number, never copy a block without changing its id.
- The pointer lists `specialisationIds: [ … ], coordinatorStaffId:` and `laboratoryIds: [ … ]` — each code must match an id character for character.
- The first line of every data file — `window.DEPARTMENT_CONTENT = window.DEPARTMENT_CONTENT || {};.`
- The file names and folders — `pages/*.html, assets/js/*.js, assets/images/*, assets/documents/*`. Every page links by path, so a rename means a broken picture or page.

> **When in doubt:** back up first and make one small change at a time.

> **Safe to edit:** the wording between HTML tags, the values of `name, title, description, intro, overview, curriculumNote, format, size, url` and every `[square bracket]` placeholder.

10. Cheat Sheet: "I Want to Change..."

I want to change...	Edit this file
University / faculty / department name	`content.js` > `institution`
Homepage welcome text / image	`content.js` > `faculty`, `department`
Dean's message or Head of Department message	`content.js` > `dean`, `hod`
About page vision / mission / history	`content.js` > `about`
Laboratories and facilities	`content.js` > `facilities`
Address, email, phone, map, social links	`content.js` > `contact`
Specialisation names, text, images	`specialisations.js`
Homepage academic tiles	`specialisations.js` > `academicOverview`
Research / publications	`research.js`
News and announcements	`news.js`
E-Resources / downloads	`downloads.js`
Staff names, emails, photos	`staff.js`
Which specialisations a staff member belongs to	`staff.js` > `specialisationIds` (codes in Section 4.7)
Which specialisations a publication belongs to	`research.js` > `specialisationIds` (codes in Section 4.7)
The coordinator of a specialisation	`specialisations.js` > `coordinatorStaffId` (codes in Section 4.7)

11. Where to Get More Help

- **Still unsure what to replace?** Check `CONTENT_CHECKLIST.md`. It lists the official information the site is still waiting for.
- **Technical / developer detail?** See `README.md` in the `docs/` folder.
- **Anything else?** Ask the webperson [`https://ruzait.github.io`] before editing.

> **Webperson:** `https://ruzait.github.io` - the person who built and maintains this site. Ask them before touching page files, ids, navigation or anything not listed in this document and whenever a file or image you need is missing.
